

Top design for sustainable, advanced water treatment

PWN Technologies

Customer focused, innovative and value driven

PWN Technologies is a customer focused, innovative and value driven company, which provides advanced solutions to the water supply market worldwide. We offer a wide variety of advanced solutions that are proven, validated and have already been implemented in day to day operations. PWN Technologies is located in the Netherlands.

PWN Technologies is a subsidiary of PWN Water Supply Company North Holland, a global leader in innovations for water treatment such as advanced oxidation and membrane techniques. We are now bringing innovative solutions to the market, including improved ion exchange treatment solutions, ceramic membrane applications and efficient, economical and reliable package treatment systems. Our solutions are largely based on PWN's new technologies for exist-

ing treatment and future needs. These advancements focus on a high level of water treatment while maintaining energy efficiency and sustainability. We design and engineer innovative drinking water production processes with lower energy consumption, less chemical waste and a smaller footprint, which are more effective, efficient and easy to handle, ensuring long-term stable operations. All our solutions are based on the philosophy that they should not be needlessly complicated.

With innovation and continuous improvement at the heart of our business performance, PWN Technologies aims to create value by offering a wide variety of solutions. We offer solutions to customers in the high-end market, as well as those in developing countries.

PWN Technologies comprises several business units, including SIX (suspended ion exchange process), CeraMac (ceramic membranes), the Perfector series (water treatment plants/ units) and fully integrated water treatment solutions.

PWN Technologies was founded in order to share the technologies of the impressive R&D programme of PWN Water Supply Company North Holland with others. All our revenues are invested in our R&D programmes. This enables us to enhance our position as a leading solution provider, solving the world's problems regarding water treatment.

PWN Technologies, partner in water supply

PWN Technologies is a wholly owned subsidiary of PWN Water Supply Company North Holland. PWN supplies water to about 1,7 million people in Holland. PWN Technologies was founded in order to share the impressive R&D programme of PWN Water Supply Company with others. Our revenues are invested in our R&D programmes. This enables us to enhance our position as a leading solution provider.
